EDICIÓN MARZO 2024

Edition March 2024

Édition mars 2024

**TARIFA DE PRECIOS
NETVITC SYSTEM®**

Estimado cliente:

Nos complace presentarle la sexta edición de nuestro catálogo/tarifa de precios exclusivo del “**Sistema Netvitic System®**”, un **revolucionario Sistema modular de unión de bridas** desarrollado y fabricado por Hidrotén íntegramente en materiales plásticos.

El Sistema Netvitic System® es el resultado de muchos años de I+D+i invertidos por Hidrotén, que siempre ha tenido claro el compromiso con sus clientes, ofreciéndoles sistemas siempre a la vanguardia del mercado capaces de cubrir sus necesidades con las máximas garantías.

El Sistema Netvitic System® engloba siete familias de productos, cuya calidad está avalada por nuestro Sistema de gestión de calidad conforme a la ISO 9001:2015 y certificado por AENOR. Dichas familias, podrán encontrarse también en nuestra nueva **tarifa de precios general nº 29**, así como en formato digital en nuestra web **www.hidrotén.es**.

En Hidrotén somos conscientes de que **la innovación constante en nuestros productos es la única vía para continuar siendo un líder mundial** en el sector de la conducción de fluidos, por ello plasmamos esta inquietud en sistemas de productos como el Netvitic System®.

Recordarle que **todo el equipo humano de Hidrotén está a su entera disposición** y que para cualquier duda o consulta técnica acerca de nuestros productos y sistemas puede resolverla a través de nuestro **departamento técnico comercial (S.A.T.C)**.

Dear customer:

We are honored to present the sixth edition of our exclusive “**Netvitic System®**” catalogue/price list, a **revolutionary modular flange connection system** developed and manufactured by Hidrotén entirely in plastic materials.

The Netvitic System® is the result of many years of R+D+i invested by Hidrotén, which has always had a clear commitment to its customers, offering systems always at the forefront of the market able to meet their needs with maximum guarantees.

The Netvitic System® comprises seven product families, whose quality is guaranteed by our Quality Management System in accordance with ISO 9001:2015 and certified by AENOR. These families can also be found in our new general **price list No. 29**, as well as in digital format on our website **www.hidrotén.es**.

In Hidrotén we are aware that **constant innovation in our products is the only way to keep being a world leader** in the fluid handling sector, so we translate this concern into product systems such as the Netvitic System®.

Remind you that **the whole team of Hidrotén is at your disposal** and that for any doubt or technical question about our products and systems you can solve it through our **commercial technical department (S.A.T.C)**.

VENTAJAS NETVITC SYSTEM® // ADVANTAGES NETVITC SYSTEM®

- El Sistema Netvitc System® se caracteriza por su **ligereza**, lo cual lo hace más versátil y dúctil a la hora de manipular las piezas, ganando siempre en comodidad. // The Netvitc System® is characterized by its **lightness**, which makes it more versatile and ductile when handling parts, always gaining in comfort.
- Su **operatividad y polivalencia** le permite unir productos de diferentes materiales, realizar modificaciones o la posibilidad de realizar giros en la instalación que por lo general un sistema tradicional no puede hacer. // Its **operability and versatility** allows it to join different materials, carry out modifications or the possibility of making turns in the installation that usually a traditional system can not permit.
- El **ahorro de tiempo** debido a la reducción de la mano de obra se traduce en beneficios económicos. // The **saving of time** as a result of the reduction of labor translates into **economic** benefits.
- Su **agilidad** en los tiempos de montaje y desmontaje lo convierten en un sistema idóneo para instalaciones modulares de tratamiento de aguas, colectores de distribución para sistemas de riego e industrias agroalimentarias. Además, facilita las labores de limpieza y mantenimiento. // Its **agility** in times of assembly and disassembly make it an ideal system for modular water treatment plants, distribution manifolds for irrigation systems and agro-food industries. In addition, it facilitates the cleaning and maintenance tasks.

CARACTERÍSTICAS // FEATURES

Materiales homologados para uso en aplicaciones de agua potable.
Materials certified for potable drinking water.

Netvitec System®, es un sistema de unión mecánica basado en la junta “J-Bil” y la brida Netvitec System®, que permite unir entre sí elementos de forma rápida. Su modularidad permite combinar directamente accesorios, válvulas y hacer transiciones de material con importantes ahorros y con las máximas garantías.

La junta “J-Bil” es el alma del Netvitec System® y como tal, está especialmente creada para trabajar en cualquier condición. Su alma de acero le confiere estabilidad a altas presiones, su diseño bilabial aumenta la estanqueidad con la presión y su superficie con nervios perimetrales asegura un óptimo funcionamiento a bajas presiones.

Netvitec System® is a mechanical connection system based on the “J-Bil” joint and the Netvitec System® flange, which allows you to easily join elements to each other with little work. As it is a mechanical system, it allows you to combine different models and materials saving a great deal of time and with an improvement of working processes.

“J-Bil” joint is Netvitec System®’s core and was especially created to be used in any condition. Its metallic core makes it stable on high pressures. Its bilabial design increases the sealing as pressure increases and its surface with perimeter nerves ensures an optimal performance on low pressures.

Detalle de junta bilabial “J-BIL” sin presión.
Detail of the “J-BIL” o-ring without internal pressure.

Detalle de junta bilabial “J-BIL” con presión.
Detail of the “J-Bil” o-ring with internal pressure.

Acero Inox A-4
Stainless steel A-4

RECOMENDACIONES DE INSTALACIÓN // INSTALLATION RECOMMENDATIONS

Las instalaciones realizadas con el Sistema Netvitec System®, como cualquier instalación convencional, **deben ir fijadas y ancladas** teniendo en cuenta los esfuerzos y empujes que vaya a soportar, por su propio peso, por las presiones internas del fluido, o por fuerzas externas como las producidas por asentamientos en el terreno. **De esta manera se evitan desplazamientos que puedan terminar en roturas o fugas.**

Installations made with SNS®, like any conventional installation, **must be fixed and anchored** taking into account the stress and thrust that they will withstand, due to their own weight, the internal pressures of the fluid, or external forces such as those produced by settlements in the ground. **This prevents displacements that could lead to ruptures or leaks.**

USO-APRIETE TORNILLOS // USE-TIGHTENING SCREWS

Para el montaje correcto de elementos de fijación en acero inoxidable con antigripante, **se recomienda enroscar de manera continua y alternativa, con un número de vueltas reducido**, evitando el uso de atornilladoras automáticas de impacto. En caso contrario, la fricción entre componentes aumenta el riesgo de gripaje.

Se recomienda el uso de un lubricante antigripaje y aplicar el par recomendado.

For the correct assembly of stainless steel components with anti-seize, it is recommended to screw in continuously and alternately, with a reduced number of turns, avoiding the use of automatic impact screwdrivers. Otherwise, friction between components increases the risk of seizure.

The use of an anti-seize lubricant and the application of the recommended torque is recommended.

| Rosca / Thread | Par. máximo (N-m) / Max torque (N-m) |
|----------------|--------------------------------------|
| M-6 | 7 |
| M-8 | 16 |
| M-10 | 32 |

Tabla realizada con coeficiente de fricción de 0.12-0.16.
Recomendaciones en base a fabricantes de tornillería.
Table based on a friction coefficient of 0.12-0.16.
Recommendations based on fastener manufacturers.

CARACTERÍSTICAS // FEATURES

Los accesorios del Sistema Netvitic System® son totalmente necesarios para poder **dar continuidad, enlazar y direccionar las tuberías** en PVC-U o PE, ayudando a dar forma a la instalación deseada. Estos accesorios están fabricados tanto en PVC-U como en PPFV, lo que les hace idóneos para poder operar en distintos sistemas de trabajo.

Una de sus principales características es la **posibilidad de rotación 360°** en sus piezas sin necesidad de tener que desmontar por completo las bridas. Su gama de accesorios PVC-U está diseñada para tener la posibilidad de encolar el accesorio (según la normativa UNE EN 1452) permitiendo hacer conexiones mixtas Netvitic System®-encolar. Así mismo, los accesorios Netvitic System® PPFV se adecuan perfectamente a los sistemas actuales de unión de tubería de PE, como la soldadura a tope o la electrofusión.

The Netvitic System® fittings are totally necessary to be able to **give continuity, connect and direct the pipes** in PVC-U or PE, helping to create the desired installation. These fittings are made of PVC-U and GRPP, which makes them suitable to operate in different working conditions.

One of its main features is the **possibility of 360° rotation** in its parts without the need to completely disassemble the flanges. Its range of PVC-U fittings is designed to have the possibility of gluing the fitting (according to the UNE EN 1452 norm) allowing to make mixed connections Netvitic System®-gluing. Likewise, the Netvitic System® GRPP fittings are perfectly suited to current PE pipe joining systems, such as electro and thermo welding.

SISTEMA DE BRIDAS NETVITC SYSTEM® // NETVITC SYSTEM® FLANGES SYSTEM

Posibilidad de giro / Turn possibility
Unión directa de dos codos / Direct connection of two elbows
Posibilidad de desmontaje / Dismountable

Conexión directa codos - válvulas
Direct connection elbow-valve

2 Modelos en 1, retención y visor.
 ◦ Combinación de salidas PVC-U - PE.
 ◦ Ligereza en sus modelos.
 ◦ Resistencia ambientes corrosivos.

Two models in one, check valve and fluid display.
 ◦ Outlet combinations PVC-U - PE.
 ◦ Lightness.
 ◦ High resistance corrosive atmosphere.

MONTAJE NETVITC SYSTEM® // NETVITC SYSTEM® ASSEMBLY

- Colocar la junta bilabial Netvitc System® en la cara exterior del accesorio. / Place the double lipped joint in the outside part of the fitting.
- Presentar los elementos Netvitc System® uno frente a otro siempre que la medida de la brida sea común. / Situate the Netvitc System® parts face to face, the measure of the flange must always be common.
Por ejemplo: codo "Air" Netvitc System® Ø90 con válvula de mariposa Netvitc System® Ø90.
For example: "Air" Netvitc System® Ø90 elbow with butterfly valve Netvitc System® Ø90.
- 3, 4 y 5.** Colocar brida Netvitc System® inferior entre alojamientos del sistema y a continuación la brida superior. / Place the lower Netvitc System® flange between the bedding of the system and then the upper flange.
- 6.** Colocar tornillería y apretar de manera alterna y progresiva los tornillos, de forma que la brida quede equilibrada. / Position the screws, tight them up in a gradual and alternative way in order to keep the flange balanced.

RECOMENDACIONES DE INSTALACIÓN // INSTALLATION RECOMMENDATIONS

Las instalaciones realizadas con el Sistema Netvitc System®, como cualquier instalación convencional, **deben ir fijadas y ancladas** teniendo en cuenta los esfuerzos y empujes que vaya a soportar, por su propio peso, por las presiones internas del fluido, o por fuerzas externas como las producidas por asentamientos en el terreno. **De esta manera se evitan desplazamientos que puedan terminar en roturas o fugas.** // Installations made with Netvitc System®, like any conventional installation, **must be fixed and anchored** taking into account the stress and thrust that they will withstand, due to their own weight, the internal pressures of the fluid, or external forces such as those produced by settlements in the ground. **This prevents displacements that could lead to ruptures or leaks.**

VISOR DE LÍQUIDOS NETVITC SYSTEM®

NETVITC SYSTEM® FLUIDS DISPLAY

CARACTERÍSTICAS // FEATURES

El visor de líquidos Netvitic System® es el único elemento para visualización de los fluidos obtenido mediante inyección directa de policarbonato, no siendo un simple trozo de tubo transparente, consiguiendo así una **perfecta integración en la instalación** y una resistencia mecánica superior.

Gracias a la conexión Netvitic System®, se consigue **el visor más ligero y rápido de montar** del mercado, aportando un gran ahorro de tiempo en la instalación gracias a la reducción en la tornillería necesaria para su montaje.

La conexión mediante el sistema Netvitic System® aporta gran versatilidad gracias a sus **múltiples opciones de salidas**, aportando una enorme facilidad en el montaje. Dispone de salidas PVC-U, PE, RH, sistema ranurado y bridas, teniendo siempre la adecuada para su instalación.

Netvitic System® liquid fluid display is the only fluid display in the market made by direct injection of polycarbonate, and it is not just a piece of transparent tube. Thus, a **perfect integration in the installation** is achieved, with optimal transparency and a higher mechanical resistance.

Thanks to the Netvitic System® connection, a **lighter fluid display** is obtained, which is also the **quickest to be assembled** in the market. It saves you lots of installation time due to a reduction of the screws to be used to assemble it.

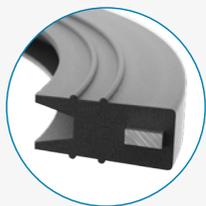

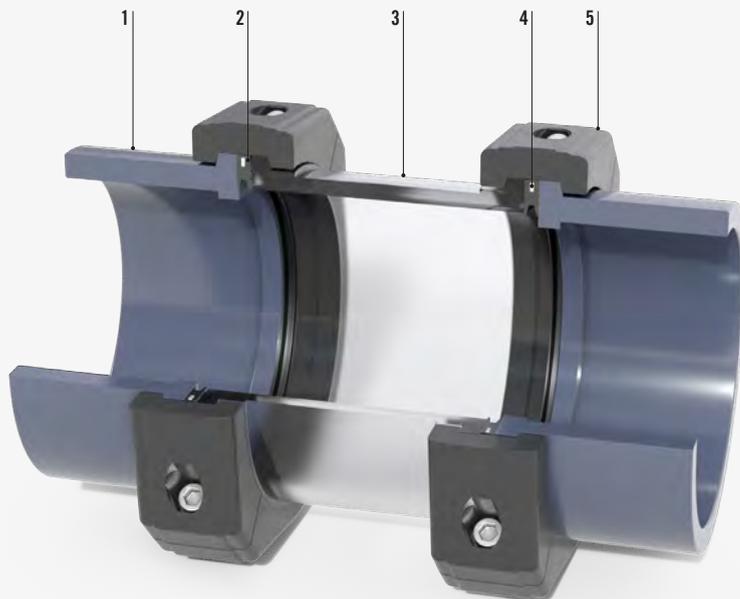

Connection made with the Netvitic System® provides a great versatility, with **many outlet options**, adding an enormous ease in the assembling. It has PVC-U, PE, FT outlets, grooved system and flanges, always with the one suitable for installation.

SCREEN PLUS

El filtro Screen Plus, es el resultado de la **integración de una válvula de retención con un medio filtrante**, para protegerla de los sólidos y evitar así obstrucciones de esta. Ver pg. 52.

The Screen filter Plus is the **integration of a check valve with a filter medium**, to protect it from solids and thus prevent clogging. See pg. 52.

VÁLVULAS DE MARIPOSA SNS®
SNS® BUTTERFLY VALVES

FAMILIA
09N FAMILY

CARACTERÍSTICAS // FEATURES

La válvula de mariposa Netvitc System® se beneficia de una **ligereza, modularidad y facilidad de montaje** sin igual en el mercado. Aporta independencia en el cierre de los dos lados de la válvula, pudiendo quedar en carga en operaciones de mantenimiento de la instalación, algo que no se podría hacer con las válvulas tradicionales.

El uso del conjunto gatillo-corona dentada de la válvula de mariposa, ofrecen una gran robustez en su manipulación y definición en su posicionamiento. Esto permite una **excelente regulación de la apertura** y una gran seguridad en la operación, conociendo siempre con precisión la posición de la maneta.

La válvula de mariposa Netvitc System®, tiene como estándar el sistema de apertura manual, pero siempre podremos montar sobre cualquier válvula un reductor manual o un actuador eléctrico o neumático.

The Netvitc System® butterfly valve is unequally **lightness, modular and assembly ease**. The closing of the two sides of the valve is independent and it can be on charge during maintenance operations of the installation, which cannot be done with traditional valves.

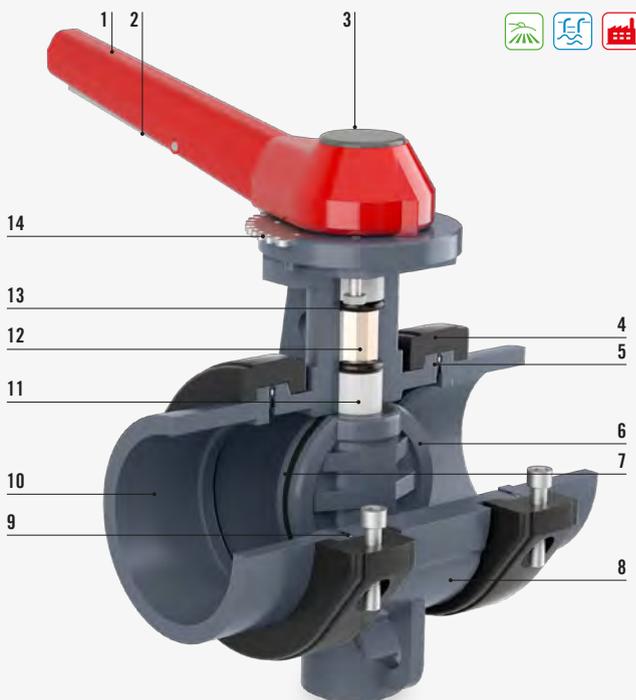

The use of the set trigger-toothed crown of the butterfly valve offers a great robustness at handling and definition at its placement. It allows an **excellent regulation of the opening** and a great safety in the operation, being always aware of the precision of the handle location.

The Netvitc System® butterfly valve has the manual opening system as a standard, but we can always set on any valve a manual gearbox or an actuator pneumatic and electric.

MONTAJE VÁLVULA DE MARIPOSA SNS® // SNS® BUTTERFLY VALVE ASSEMBLY

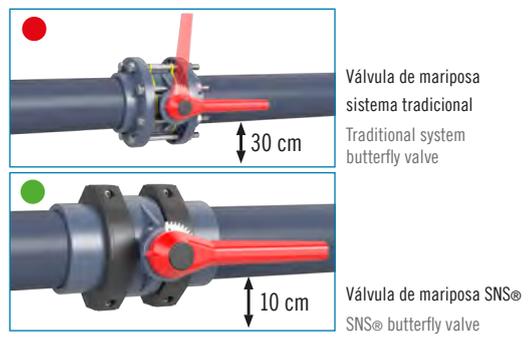

1. Encolado el adaptador, colocar la válvula quedando la junta entre las dos partes.
2. Colocar la brida, asegurando que asienta debidamente en las dos partes.
3. A continuación, colocar la parte opuesta de la brida y la tornillería, apretando de forma alternativa.
4. Se repite la operación en la otra salida, quedando la válvula instalada.

VENTAJAS SISTEMA TRADICIONAL-SNS® // ADVANTAGES TRADITIONAL SYSTEM-SNS®

Las válvulas de mariposa Netvitc System® son más ligeras que el sistema tradicional, manteniendo todas sus garantías y mejorando sus prestaciones. Son válvulas que gracias a su sistema son más compactas, lo que le confiere una mayor versatilidad para montajes en lugares de difícil instalación.

Netvitc System® butterfly valves are lighter than the traditional system, keeping all their guarantees and improving performance. These valves are more compact thanks to their system, which gives them greater versatility for installation in places where installation is difficult.

- Los actuadores de Simple efecto son aquellos que realizan la apertura mediante aire y el cierre mediante unos muelles de seguridad.
- Single effect ensures the opening by means of air and the closing by means of security springs.
- Los actuadores de Doble efecto son aquellos que tanto para el movimiento de apertura como para el de cierre lo realizan mediante aire.
- Double effect ensures both opening and closing movement using air.

- Acabado de la superficie inferior del cuerpo (Ra 0,4-0.6 um) para reducir al mín. la fricción y maximizar la vida del actuador. Protección externa cuerpo: anodizado duro. 500 Hrs. Cámara Niebla salina según ASTM B117-73. Protección externa tapas: recubrimiento epoxy-poliester.
- Patines deslizantes, material de bajo cociente de fricción (LAT LUB) evitando contacto metal-metal, fácilmente reemplazable, para su mantenimiento con doble taladro inferior para el anclaje y centraje de la válvula según norma ISO 5211 y DIN 3337.
- Conexión inferior eje cuadrado hembra según ISO 5211/ DIN 3337 para el montaje a 45° o 90° indistintamente.
- Montaje directo electroválvula NORMA NAMUR. / Montaje accesorios según norma NAMUR VDI/DE 3845.
- Temperatura de trabajo -20°C a +80°C.
- Limitador de carrera a la apertura y al cierre; control de funcionamiento y estanqueidad 100% a través del sistema electrónico. Certificación individual.
- Finish of the body lower surface (Ra 0.4-0.6 um) to reduce at min. the friction and maximize the actuator life. Body external protection: strong anodized 500Hrs. Salt fog chamber according to ASTM B117 -73. Lid external protection: epoxy-polyester coating.
- Slipping skates, low friction quotient material (LAT LUB) avoiding metal-metal contact, easily replaceable, for its maintenance with lower double hole for anchoring and centering of the valve according to ISO 5211 and DIN 3337 standards.
- Lower connection with female square shape axis according to ISO 5211/DIN 3337 for 45° or 90° assembly, without distinction.
- Direct assembly of electrovalve NAMUR STANDARD / Fitting assembly according to NAMUR VDI/DE 3845.
- Working temperature from -20°C to +80°C.
- Motion limiter for opening and closing; Control of functioning and impermeability 100% through the electronic system. Individual certification.

REPARACIONES EN CARGA

LOAD REPAIRS

En este ejemplo podemos ver como gracias al Sistema Netvitc System®, se puede proceder a la reparación de una tubería dañada, para sustituirla estando la instalación en carga evitando todos los problemas existentes en una instalación tradicional.

In this example we can see how thanks to the Netvitc System®, a damaged pipe can be repaired and replaced with the load installation in operation, avoiding then all the relevant troubles in the traditional assembly.

Se produce rotura de tubería en una instalación.
In case of broken pipe.

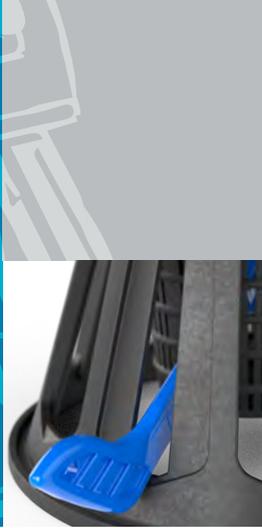

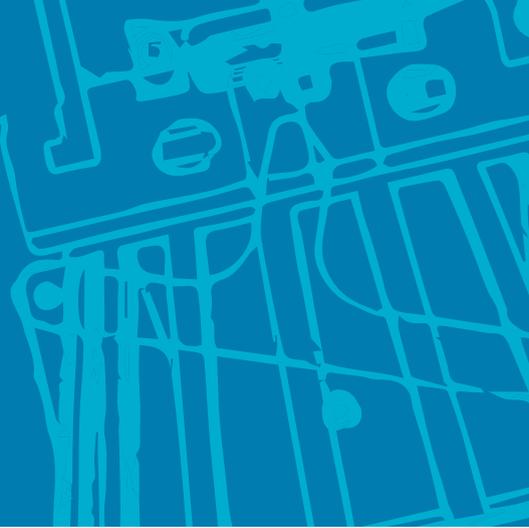

En una instalación tradicional, deberíamos vaciar la tubería y desmontar la válvula.
In a traditional installation, pipe should be emptied and disassembled the valve.

Una vez reparada y ensamblada la tubería, la instalación vuelve a funcionar correctamente.
As soon as the pipe has been repaired and assembled, the installation is working properly again.

Gracias al sistema Netvitc System®, podemos proceder al desmontaje de la tubería dañada, para sustituirla, estando la instalación en carga.
Thanks to the Netvitc System®, we can disassemble the damaged pipe with the installation in charged.

Netvic System

UNICO
en el mercado

CARACTERÍSTICAS // FEATURES

La nueva y mejorada válvula de aspiración Netwell® sistema de pie, está pensada para estar colocada en el fondo del depósito, pozo o balsa de riego **incorporando un nuevo brazo descarga más ergonómico que facilita las operaciones de mantenimiento y un asidero creado para enlazarlo con una boya y facilitar su manipulación.** El uso del SNS® en sus conexiones permite que las operaciones de mantenimiento sean más rápidas. Por otro lado la válvula de flotación está ideada para trabajar cerca de la superficie y gracias al nuevo diseño de su cesta, maximiza el caudal de aspiración y reduce la pérdida de carga.

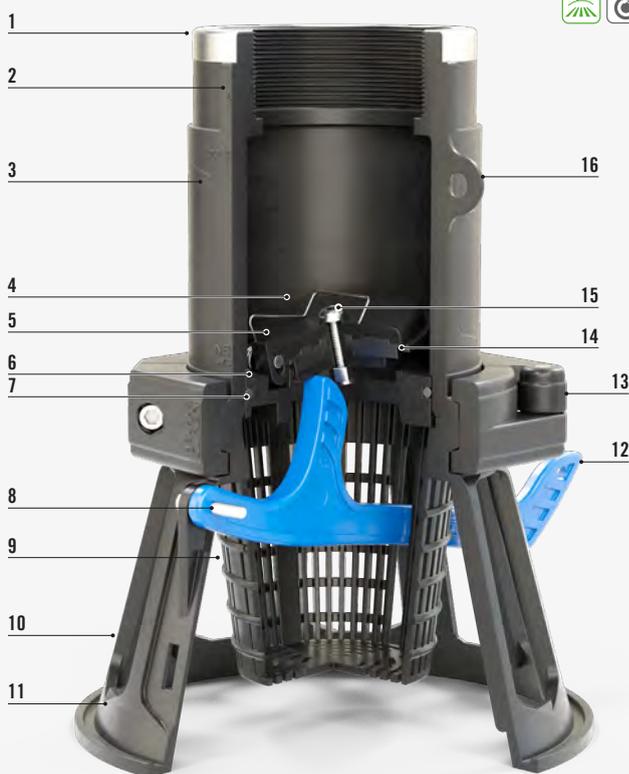

El sistema de clapeta abatible permite un elevado paso de agua, baja pérdida de carga y una perfecta estanqueidad a baja presión, garantizada con presiones superiores a 0.1 bar. **El uso de un muelle doble de acero Springflex aporta una gran durabilidad.**

The new and improved Netwell® foot valve is designed to be placed at the bottom of a tank, well or irrigation pool. **Incorporating a much more ergonomic discharge arm that eases maintenance work and a handle created to connect it with a buoy and facilitate its handling.** Using SNS® in your connections allows for faster maintenance operations. On the other hand, the float valve is designed to work close to the surface. Thanks to its design, it maximizes the suction flow and reduces pressure loss.

The folding flap system allows a high-water flow, low pressure drop and perfect tightness at low pressure, guaranteed with pressures higher than 0.1 bar. **The use of a double Springflex steel spring provides great durability.**

COMPONENTES SISTEMA DE PIE // FOOT SYSTEM COMPONENTS

1. Refuerzo boca Inox A-2
2. Nervaduras de seguridad, sujeción y apriete
3. Cuerpo PPFV
4. Clapeta PA
5. Muelle doble springflex
6. Cuerpo asiento clapeta PA
7. Junta tórica EPDM
8. Tornillo Inox A-2
9. Cesta/filtro contra áridos y algas PP
10. Rejilla soporte y protección algas PP
11. Base reforzada de apoyo y protección
12. Palanca descarga apertura manual PP
13. Brida Netvic System® abisagrada PA
14. Junta de cierre estanqueidad EPDM
15. Tornillo clapeta Inox A-2
16. Asidero

1. SS A-2 reinforcement
2. Security nerver for tightening
3. GRPP body
4. PA closing flap
5. Springflex double spring
6. Basket / filter against arid and seaweed
7. EPDM o-ring
8. Stainless steel A-2 bolt
9. PP basket filter against dirtiness
10. PP Support and protection grid seaweed
11. Reinforced base
12. Manual discharge handle
13. PA Netvic System® hinged flange
14. EPDM closing gasket
15. Closing disc bolt SS A-2
16. Handle

VÁLVULAS DE RETENCIÓN LINEAL NETVITC SYSTEM®

NETVITC SYSTEM® LINEAL CHECK VALVES

CARACTERÍSTICAS // FEATURES

La válvula de retención lineal Netvitic System® ofrece una solución única en sus instalaciones, evitando los contraflujos indeseados y aportando gran protección frente a fenómenos de golpe de ariete, todo ello con una **mínima pérdida de carga y una estanqueidad** garantizada con presión 1 mca.

La gama consta de dos posibles materiales para el cuerpo, el estándar en PPFV y el modelo visor en policarbonato, que añade a las características de la válvula la función de visor, aportando un **enorme valor añadido en instalaciones** como las de piscina o tratamiento de agua.

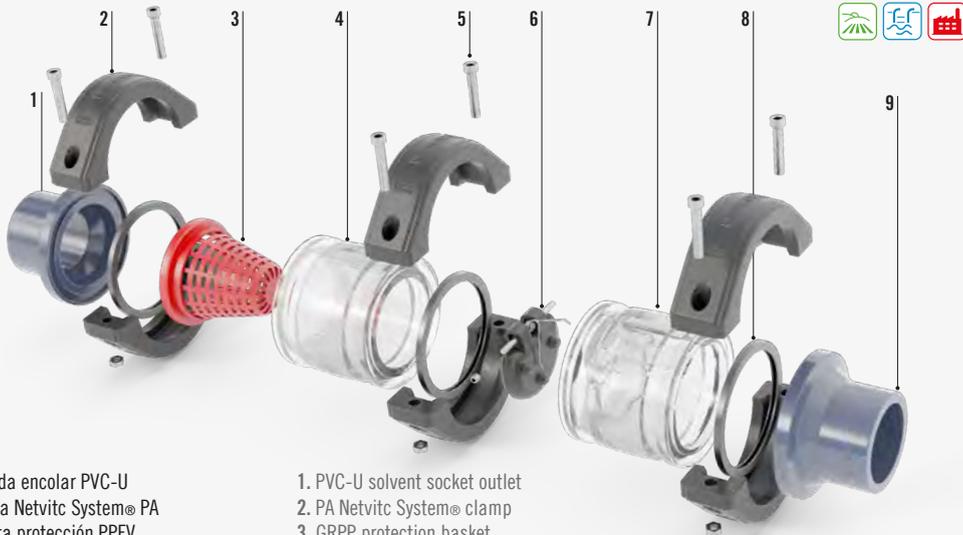

Las válvulas de retención lineal Netvitic System®, gracias a su exclusivo cuerpo central con conexiones SNS®, permite una **gran diversidad de combinaciones en sus salidas**.

The Netvitic System® lineal check valve offers a unique solution in its installations, avoiding undesired counterflows and providing a great protection against water hammering, and all this with a **minimum loss of charge and guaranteed water tightness** with 1mwp pressure.

The range offers two possible body materials, the standard in GRPP and the polycarbonate fluid display which adds to the valve characteristics a fluid display function, providing a **high added value in installations** such as swimming-pool or water treatment.

The Netvitic System® lineal check valve provides a **great diversity of outlet combinations** due to its exclusive central body with SNS® unions.

MONTAJE VÁLVULA RETENCIÓN LINEAL SNS® // ASSEMBLY SNS® LINEAL CHECK VALVE

1. Encolar el adaptador.
 2. Situar la junta y el cuerpo frente al portabridas, haciendo coincidir el cuerpo y la guía de apoyo, siempre en la dirección del flujo.
 3. Colocar la brida y la fijamos con su tornillería.
 4. Repetir la operación en la otra parte de la válvula.
 5. Válvula instalada en línea lista para su funcionamiento.
1. Glue the adaptor.
 2. Place the gasket and the body in front of the flange holder, aligning the body and the support guide, always in the flow direction.
 3. Place the flange and fix screws.
 4. Repeat the operation on the other side of the valve.
 5. Valve installed in line ready for operation.

INSTALACIÓN VÁLV. RETENCIÓN LINEAL SNS® // INSTALLATION SNS® LINEAL CHECK VALVE

En la imagen vemos una válvula de retención lineal visor Netvitc System®. Podemos apreciar el cuerpo transparente que permite la visión perfecta del fluido, además el uso del Netvitc System® aporta modularidad, permitiendo un montaje rápido y su uso con distintos materiales simplemente cambiando la salida. // In the image we can see a Netvitc System® lineal check valve. We can appreciate the transparent body that allows the perfect vision of the fluid, in addition the use of the Netvitc System® brings modularity, allowing a fast assembly and its use with different materials simply changing the outlet.

FILTRO SCREEN PLASTIC

El filtro Screen Plastic aporta una utilidad extra a los visores con la inclusión de un **medio filtrante**, siendo una nueva opción para **proteger los sistemas hidráulicos** de los sólidos que puede arrastrar el fluido. Ver pg. 59.

The Screen Plastic filter adds a new utility to the sight glasses with the inclusion of a **filter medium**, offering a **new option to protect the hydraulic systems** from solids that can be carried by the fluid. See pg. 59.

FILTROS NETVITC SYSTEM®
NETVITC SYSTEM® FILTERS

FAMILIA
08N FAMILY

CARACTERÍSTICAS // FEATURES

El filtro “SCREEN” es un elemento que **aporta la protección necesaria en instalaciones** de cualquier tipo, puesto que retiene los sólidos que pueda arrastrar el agua y que podrían dañar otros elementos, tales como contadores, sondas, válvulas, etc.

El medio filtrante es una malla integrada en una estructura plástica, que **aporta mayor agilidad en la limpieza del cartucho** así como un grado de filtración totalmente estable y homogéneo. Ésta podrá variar su micraje en función del tamaño de partículas a retener. El diseño de la junta permite un **fácil montaje** y ofrece una perfecta estanqueidad a baja presión.

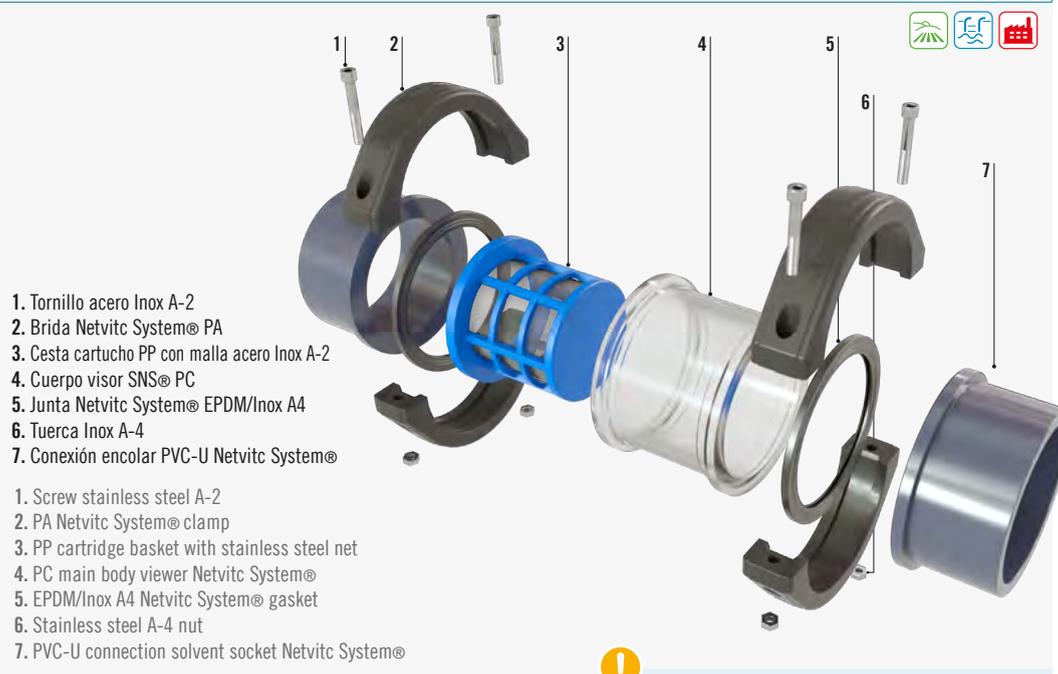

Dentro de la gama disponemos de un nuevo modelo, el filtro **Screen Plastic**, diseñado específicamente para ser un prefiltro en línea. Con este modelo, añadimos una **nueva utilidad a los visores con la inclusión de un medio filtrante**, una malla totalmente inyectada en plástico la cual asegura una **protección eficaz frente a sólidos de gran tamaño** en instalaciones como por ejemplo las piscinas, que están muy expuestas a entrada de sólidos en el circuito hidráulico.

The “SCREEN” filter provides the necessary protection in any kind of installation, as it eliminates any solid which may be dragged by water and which may damage other elements such as meters, probes, valves, etc.

The filtering media, a mesh integrated in a plastic structure, provides a greater agility in the cleaning of the cartridge as well as a totally stable and homogeneous filtering level. Its micronage may vary as to the size of the particles to be kept. The joint design makes assembling easier and offers perfect water tightness at a low pressure.

Within the range we have a new model, the **Screen Plastic** filter, specifically designed to be an in-line pre-filter. With this model, we add a new utility to the viewers with the inclusion of a filtering medium, a mesh totally injected in plastic which ensures effective protection against large solids in facilities such as swimming pools, which are highly exposed to the entry of solids in the hydraulic circuit.

EJEMPLO DE APLICACIÓN FILTRO SCREEN // APPLICATION EXAMPLE SCREEN FILTER

A continuación apreciamos la aplicación del **modelo SCREEN** como filtro de seguridad después de la filtración principal. La malla de acero inoxidable del **filtro SCREEN** protegerá la instalación frente a cualquier problema que se pudiese dar en el equipo de filtración, evitando que la suciedad entre en el resto del sistema y los daños que estos pudiesen ocasionar.

Below we appreciate the application of the **SCREEN model** as a security filter after the main filtration. The stainless steel net of the **SCREEN filter** will protect the installation against any problem in the filtration equipment, avoiding the dirtiness to enter in the system and the damages that it may cause.

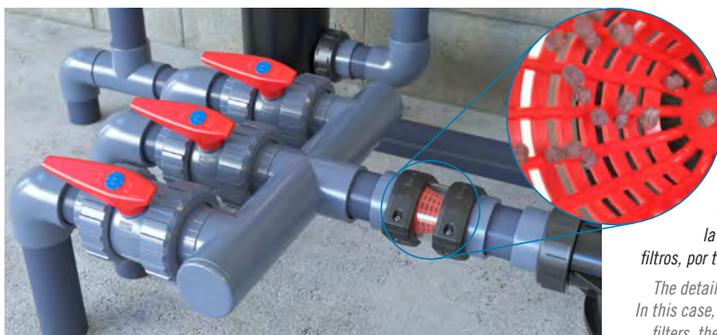

El detalle muestra como el cartucho retiene en su interior la suciedad gracias a su malla de acero inoxidable.

The detail shows how the cartridge retains the dirtiness thanks to its stainless steel net.

EJEMPLO DE APLICACIÓN FILTRO SCREEN PLASTIC // APPLICATION EXAMPLE SCREEN PLASTIC FILTER

En la imagen podemos ver el filtro modelo **SCREEN PLASTIC** como prefiltro en la aspiración de una bomba de instalación de filtrado de una piscina doméstica. La malla filtrante protege la instalación frente sólidos de gran tamaño; al estar fabricada en PP ofrece una resistencia óptima frente al cloro o el agua salada, que son los productos químicos más habituales en el tratamiento de agua en piscinas.

In the image we can see the filter model **SCREEN PLASTIC** as a pre-filter in the suction of a pump installation of a domestic swimming pool. The filtering mesh protects the installation against big size solids; as it is made of PP it offers an optimal resistance against chlorine or salt water, which are the most common chemical products in swimming pool water treatment.

El detalle muestra como retiene en su interior la suciedad gracias a su malla de PP. En este caso, la función que se busca es la protección de bombas y filtros, por tanto las partículas retenidas son mayores de 4mm.

The detail shows how it retains dirt inside using its PP mesh. In this case, the function sought is the protection of pumps and filters, therefore the particles retained are greater than 4mm.

CARACTERÍSTICAS // FEATURES

Los filtros cazapiedras Hidroten, son la opción perfecta por su resistencia a la corrosión, ligereza y comodidad en las operaciones de limpieza y mantenimiento. Disponemos de dos modelos, “STONE” y **vertical**, que **ofrecen una perfecta protección** de los elementos de su instalación frente a los sólidos que pueda arrastrar el fluido. El modelo “STONE” está diseñado para trabajar en horizontal, mientras que el modelo vertical, posee una configuración que lo hace único para trabajar en vertical.

Gracias al sistema Netvitic System® y su versatilidad, se adaptan a cualquier instalación. La inclusión de la **nueva tapa NuTen**, hace que las **operaciones de limpieza resulten más rápidas y sencillas**.

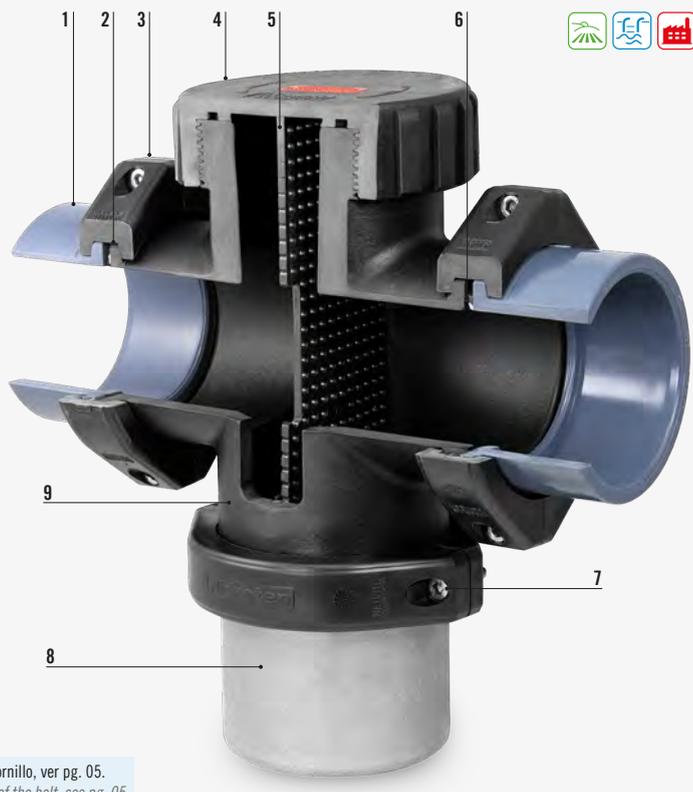

The Hidroten strainer filters are the perfect option due to their corrosion resistance, lightness and convenience in cleaning and maintenance works. We have two models, “STONE” and **vertical**, that **offer a perfect protection** to the elements of the installation against the solids which may be dragged in the fluid. The “STONE” model has been designed to work horizontally, while the vertical model, has a configuration that makes it unique for work vertically.

Thanks to its Netvitic System® and its versatility, they can be adapted to any installation. The inclusion of the **new NuTen cap**, cover makes cleaning tasks are faster and easier.

LIMPIEZA CAZAPIEDRAS VERTICAL // VERTICAL STONE CLEANING

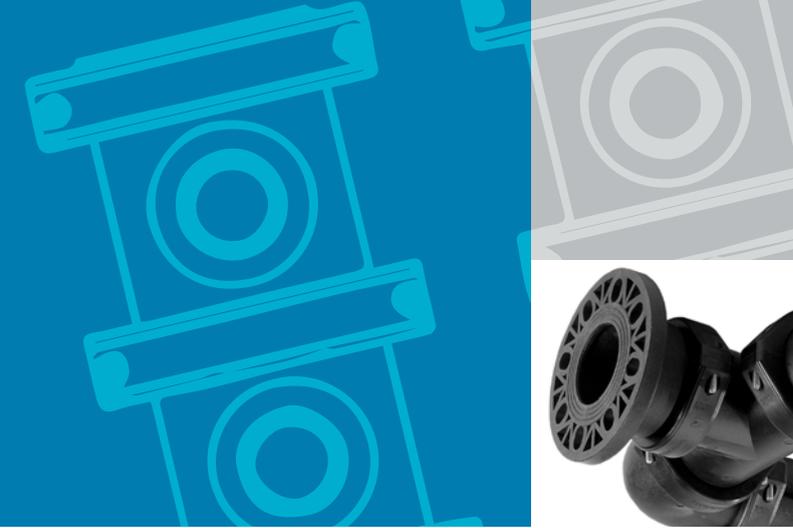

El filtro cazapiedras vertical Netvitc System® es único en el mercado por su diseño específico para ser instalado en vertical. Se trata de una optimización frente a los cazapiedras tradicionales en forma de Y, que son diseños horizontales que al utilizarse de forma vertical provocan que los sólidos queden en circulación.

1. El cazapiedras vertical retiene los sólidos de gran tamaño, que quedan atrapados en la parte inferior, quedando fuera del flujo, evitando arrastres sucesivos.
 2. Desmontar el tapón inferior para eliminar la suciedad.
 3. Montar nuevamente el tapón SNS® y seguir trabajando.
1. The vertical strainer retains large solids, being trapped in the lower part, staying out of the flow, avoiding successive trawls.
 2. Disassembling the below access cap to remove dirt.
 3. Reassemble the SNS® cap and continue working.

EJEMPLO DE APLICACIÓN CAZAPIEDRAS VERTICAL // APPLICATION EXAMPLE VERTICAL STRAINER

Ejemplo de hidrante de riego multiusuario modular Netvitc System®. Las características del sistema Netvitc System® permiten una perfecta adaptación para cada instalación. En primer término vemos el cazapiedras vertical, que nos permite optimizar el diseño buscando el máximo aprovechamiento del espacio y la máxima facilidad en el mantenimiento.

1NH FAMILY

CARACTERÍSTICAS // FEATURES

La modularidad convierte al sistema Netvitic System® en la solución ideal a la hora de plantear el diseño e instalación de hidrantes. Las posibilidades de modificaciones en la estructura de los diseños son prácticamente infinitas, pudiendo adecuarse a las características específicas de cada instalación.

La elección del PPFV como material para los accesorios Netvitic System® responde a las necesidades de las instalaciones, aportando un **magnífico comportamiento químico**, una **óptima resistencia** frente a las radiaciones solares y las heladas, así como una **gran ligereza** que permiten grandes ahorros en tiempos de instalación.

La perfecta unión mecánica del sistema Netvitic System® asegura la máxima estanqueidad y su diseño de bridas con 2 tornillos permite una enorme velocidad de instalación. **Gran flexibilidad para cambiar la configuración de la instalación** según las necesidades, con una facilidad y rapidez inalcanzable para cualquier otro sistema.

Modularity makes the Netvitic System® the ideal solution in the process of design and installation of hydrants. The possibilities of modifications in the structure of the designs are almost unlimited and they can adapt to the specific characteristics of any installation.

The election of GRPP as the material used in Netvitic System® accessories meets the needs of the installations and provides a **great chemical performance**, an **optimal resistance** to solar radiation and frosts, as well as a **great lightness** which save installation time.

The perfect mechanical connection of Netvitic System® guarantees maximum water tightness and its design of flanges with two screws speeds up the installation. It offers a **great flexibility to change the setting of the installation** according to your needs, as well as an unachievable ease and speed for any other system.

EJEMPLOS INSTALACIONES NETVITC SYSTEM®

INSTALLATIONS EXAMPLES

Depósito de
compensación

Filtración
Filtration

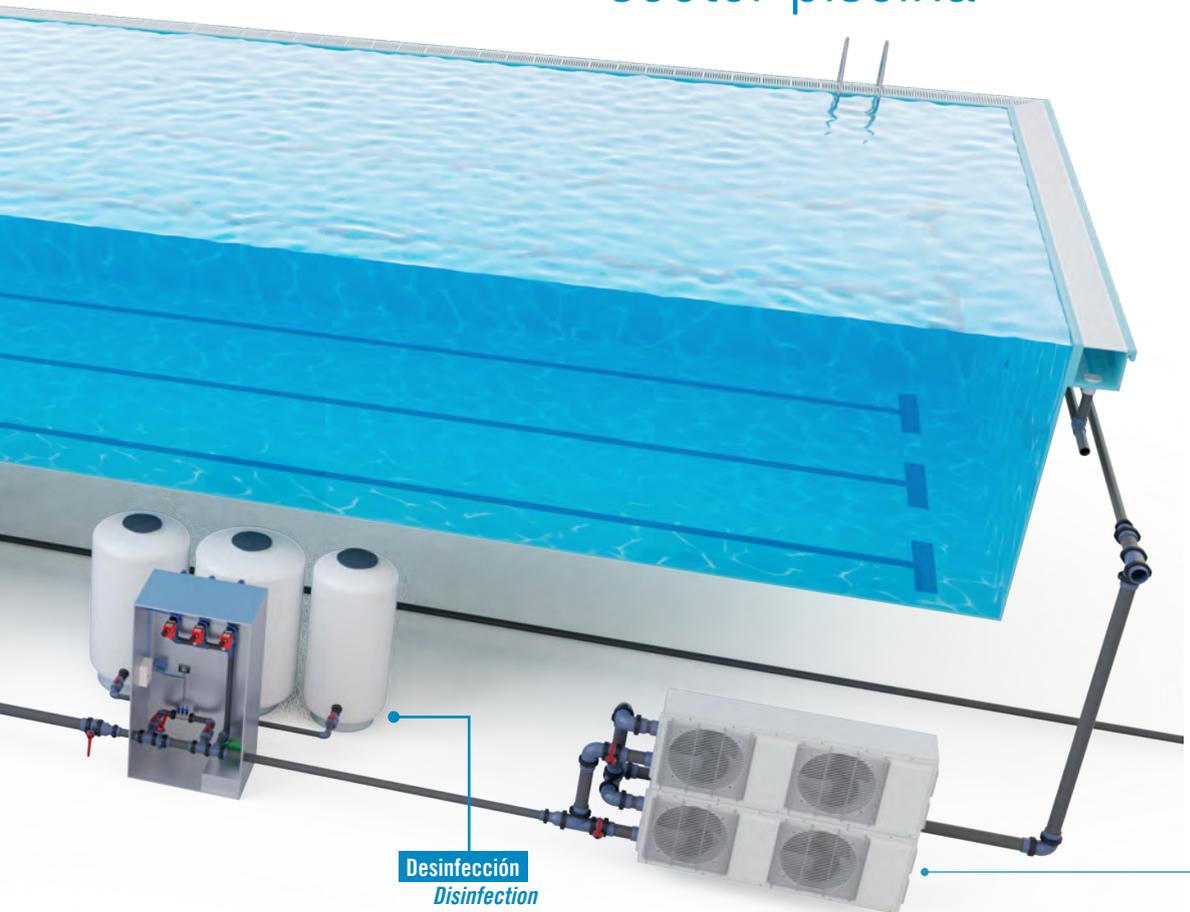

El tratamiento del agua de las piscinas tiene dos etapas fundamentales: la **filtración** y la desinfección. En la instalación de filtros de arena, realizada íntegramente con SNS®, se han dispuesto los **filtros trabajando dos a dos, utilizando un único colector de válvulas** para cada pareja de filtros.

La versatilidad y modularidad del SNS® ha permitido realizar la instalación reduciendo encoladuras y las características de las **válvulas de mariposa SNS®** permiten una automatización posterior del sistema, rápida y sin tener que hacer modificaciones en la instalación. La **ausencia de la tradicional tornillería** mejora visualmente la instalación, pero sobre todo, **elimina los problemas de corrosión y alarga la vida útil** de la instalación.

*Swimming pool water treatment has two fundamental stages: **filtration** and disinfection. In the installation of sand filters, made entirely with SNS®, the filters have been arranged in pairs, using a single valve manifold for each couple of filters.*

*The versatility and modularity of the SNS® facilitates the installation process by reducing the number of gluing and SNS® butterfly valves allow subsequent automation of the system, quickly and without having to make changes to the assembly. The **absence of screws** visually improves the installation, but more importantly, **eliminates corrosion problems and increases the lifetime** of the system.*

Netvitc System® sector piscina

Desinfección *Disinfection*

Tras la filtración es imprescindible la **desinfección del agua**, tradicionalmente la manera más común de desinfección es el cloro, que se va inyectando según las necesidades junto con correctores de pH. Cada vez están más presentes los **sistemas de electrólisis salina**, que permiten la generación in situ del cloro y sistemas de ultravioleta.

En la imagen podemos ver la inyección de los productos químicos gobernada por **válvulas automatizadas** que varían su apertura en función de las necesidades.

*After the filtration process, the water must be **disinfected**. Traditionally, the most common method of disinfection is chlorine, which is injected as required together with pH regulators. Salt **electrolysis systems**, which allow chlorine to be generated in situ, and ultraviolet systems are becoming more and more common.*

*In the picture we can see the injection of the chemical products controlled by **automated valves** which change their opening according to the needs.*

Climatización *Heating*

De cara a incrementar la usabilidad de las piscinas, cada vez es más habitual la inclusión de **bombas de calor** para obtener una temperatura que permita el baño durante más meses en el año.

*The inclusion of heat pumps allows to obtain a **temperature suitable** for swimming during more months of the year.*

SISTEMA DE FILTRACIÓN // FILTRATION SYSTEM

PRODUCTOS HIDROTEN // HIDROTEN PRODUCTS

Collarín bisagra salida encolar, válvula de mariposa SNS® manual y neumática, válvula retención lineal Netvitec System® cuerpo visor, válvula de mariposa Implex®, válvula retención System®.

Hinged sleeve solvent socket outlet, manual and pneumatic SNS® butterfly valve, Netvitec System® sight glass lineal check valve, Implex® butterfly valve, System® check valve.

DESCRIPCIÓN DEL PROYECTO // PROJECT DESCRIPTION

Por tratarse de una instalación expuesta a un ambiente clorado se ha prescrito la utilización de válvulas con sistema Netvitec System®, ya que reducen la tornillería y minimizan los problemas ocasionados por la corrosión. Para obtener los colectores más compactos que con cualquier otra solución del mercado, se ha optado por la utilización del collarín bisagra.

Being an installation exposed to a chlorinated environment, the use of valves with Netvitec System® has been prescribed, because they reduce the screws and minimize the problems due to corrosion. To make the manifolds more compact than with any other solution on the market, the hinged sleeve has been used.

SISTEMA FILTRACIÓN DE REFRIGERACIÓN // FILTRATION IN INDUSTRIAL REFRIGERATION

PRODUCTOS HIDROTEN // HIDROTEN PRODUCTS

Válvulas mariposa SNS®, accesorios SNS®: codo 90°, codo "Air", te 90°, tapón.

Netvitec System® butterfly valves, SNS® fittings: 90° elbow, "Air" elbow, 90° tee, plug.

DESCRIPCIÓN DEL PROYECTO // PROJECT DESCRIPTION

La aplicación del Sistema Netvitec System® en el circuito de refrigeración industrial de alta capacidad, aporta flexibilidad a la instalación, reduce peso y permite un mantenimiento mucho más rápido que los sistemas tradicionales.

The application of the Netvitec System® in the high-capacity industrial refrigeration circuit, provides installation flexibility, reduces weight and allows for much faster maintenance than traditional systems.

SISTEMA DE FILTRACIÓN // FILTRATION SYSTEM

PRODUCTOS HIDROTEN // HIDROTEN PRODUCTS

Collarín bisagra salida encolar, válvula de mariposa Netvitic System®, válvula retención lineal Netvitic System® cuerpo visor, válvula de mariposa Implex®, válvula retención System®.

Hinged sleeve solvent socket outlet, Netvitic System® butterfly valve, Netvitic System® sight glass lineal check valve, Implex® butterfly valve, System® check valve.

DESCRIPCIÓN DEL PROYECTO // PROJECT DESCRIPTION

Instalación del sistema de filtrado de las piscinas y parque acuático del Camping Lido, situado en la población italiana de Lazise. Destaca el uso de válvulas de mariposas y retención con sistema Netvitic System®, así como collarines bisagra. Ambos sistemas aportan las más altas prestaciones en instalaciones con ambientes agresivos.

Installation of filtering system in the swimming pools and water park Camping Lido, located in the Italian town of Lazise. It emphasizes the use of butterfly and check valves with Netvitic System®, as well as collarines bisagra. Both systems provide the highest performance in aggressive environments.

NORMAS GENERALES DE VENTA

Las especificaciones de venta contenidas en este documento son referentes a cualquier pedido. Las modificaciones deben contar con la aceptación de Hidroten, S.A. por escrito.

Las especificaciones y tarifas pueden revisarse en cualquier momento, para la totalidad o parcialidad de las operaciones cursadas en la fecha de revisión.

Pedidos: Los pedidos se realizarán por escrito, en el que figurarán referencias y especificaciones contenidas en la tarifa oficial de Hidroten, S.A. y manteniendo las cantidades que en ella figuran.

Entrega: La fecha de salida de los pedidos de nuestros almacenes fijará la fecha de entrega.

Los pedidos podrán ser suministrados, en parte, sin que ello suponga la anulación de los mismos.

Precios: Los precios indicados en la tarifa de Hidroten, S.A. son franco fábrica, incluyen los embalajes, siendo por cuenta del comprador otros gastos como impuestos o arbitrios.

Las facturas se realizarán a la entrega de los pedidos con los precios vigentes en la fecha de salida.

Transporte: El transporte de mercancías es responsabilidad total del comprador, aún en aquellos casos en que se realice a portes pagados.

Otros gastos no especificados en nuestra tarifa (embalajes marítimos, avión, etc) irán a cuenta del comprador.

Garantía: Los productos Hidroten, S.A. están garantizados por un año desde la fecha

de salida de mercancía, contra cualquier problema que pudiera surgir por un defecto de fabricación. Nuestra garantía única y exclusivamente comprende la reparación o sustitución en nuestras instalaciones de las piezas defectuosas, no atendiendo a indemnizaciones ni a otros gastos. La garantía no será válida cuando los defectos sean consecuencia de un trato incorrecto o bien que hayan sido manipulados, reparados o modificados fuera de nuestras instalaciones, igualmente, la garantía no será válida cuando el producto haya sido instalado con materiales o métodos fuera de NORMAS.

La garantía de nuestros materiales queda limitada a la reposición del producto, modelo o pieza que sea reconocida como defectuosa.

Los gastos ocasionados por la devolución y reenvío van a cuenta del comprador.

Pago: Todos los pagos serán efectuados al contado, excepto en aquellos casos en que haya un convenio escrito. Las modificaciones en el vencimiento del pago, en la forma o en la fecha, deberán contar con nuestra autorización por escrito.

Cualquier gasto, impuesto o tasa efectivo a partir del pedido irá por cuenta del comprador.

El comprador reembolsará al vendedor en concepto de daños y perjuicios las cargas bancarias y judiciales devengables a causa de la devolución de efectos impagados.

Reclamaciones y devoluciones: No se admitirán devoluciones ni reclamaciones después de 10 días de la recepción del pedido. Si la reclamación es aceptada por Hidroten, S.A., deberá remitir el material perfectamente embalado, siendo a cargo del comprador los costos de envío. Así como

se aplicará un incremento de un 10% en concepto de manipulación. Los abonos de devoluciones admitidas se deducirán de próximas facturas, tras su anotación en cuenta.

Anulación: Hidroten, S.A. se reserva el derecho de anular o rescindir cualquier acción de venta en caso de no cumplirse cualquiera de las condiciones expuestas en este documento, así como en situaciones de impago, total o parcial, de un pedido, o retraso en el pago de un pedido anterior, así como en el caso de emprender contra el comprador procedimientos ejecutivos o éste se declarara en suspensión de pagos o quiebra.

Reserva de propiedad: Los materiales suministrados serán propiedad de Hidroten, S.A. hasta que no se haya realizado el pago de los mismos.

Hidroten, S.A. se reserva el derecho de retirar la mercancía, total o parcialmente, del domicilio del comprador, si este no hace efectivo algún pago.

Competencia judicial: Para resolver las cuestiones que puedan derivarse de la aplicación de estas normas, tanto Hidroten, S.A. como el comprador, convienen en someterse a los Juzgados y Tribunales de Alicante, renunciando a su propio fuero si fuese otro.

El contenido de este documento y las características de nuestros productos, puede ser modificado total o parcialmente sin previo aviso por Hidroten, S.A.

Sales Terms

The specifications contained in this document are applicable to any order. Any modifications will require the written acceptance of Hidroten S.A. The specifications and rates may be revised at any time with respect to all or any of the orders in progress at the date of revision.

Orders: Orders must be placed in writing and indicate the references and specifications contained in the official price list of Hidroten S.A., maintaining the amounts shown therein.

Delivery: The date of despatch of the orders from our warehouses will be the date of delivery. Orders may be partly filled without this implying their cancellation.

Prices: The prices shown on the price list of Hidroten S.A. include packaging; any other expenses, such as taxes or local assessments, will be for the account of the purchaser. Invoices will be issued upon delivery at the prices applicable on the date of despatch.

Transport: The transport of goods is the entire responsibility of the purchaser, even in those cases in which it is carried out on a carriage paid basis. Other expenses not specified in our price list (packing for transport by sea or air, etc.) shall be for the account of the purchaser.

Warranty: Hidroten S.A.'s products are warranted for one year from the date of despatch of the goods against any problem deriving from a defect of manufacture. The warranty of our materials is limited to the

replacement of the product, model or component recognized as defective. The expenses of return and reshipment shall be for the account of the purchaser.

Payment: All payments shall be made in cash, except in those cases in which a written agreement exists. Modifications in the term of payment, or in the form or date thereof, must have our written authorization. Any expense, tax or local levy applicable after the order has been placed shall be for the account of the purchaser.

The purchaser shall reimburse to the seller by way of damages any bank and judicial charges incurred as a result of the return of dishonoured drafts.

Claims and returns: No returns or claims shall be admitted after 10 days from the receipt of your order. If your claim is accepted by Hidroten S.A. you should send us the defective material properly packed, the expenses of shipment being for your account.

If a return is not approved by Hidroten S.A., any risk or expenses shall be for the account of the purchaser. A 10% handling cost will be applicable.

Cancellation: Hidroten, S.A. reserves the right to cancel or terminate any sales operation in the event that any of the conditions set out herein is not fulfilled, as well as in the event of non-payment, in whole or in part, of any order or any delay in payment of any previous order, or if it is necessary to bring executive proceedings against the purchaser or if the purchaser is declared in suspension of payments or bankruptcy.

Reservation of the title: The materials supplied shall remain the property of Hidroten S.A. until they have been paid for.

Hidroten S.A. reserves the right to remove the goods, in whole or in part, from the premises of the purchaser if the purchaser fails to make any payment.

Competent jurisdiction: For the settlement of any disputes that may arise in connection with the application of these conditions, both Hidroten S.A. and the purchaser agree to submit to the Courts and Tribunals of Alicante, waiving their right to any other jurisdiction to which they may be entitled.

The contents of this document and the specifications of our products may be modified, in whole or in part, by Hidroten S.A. without prior notice.

Conditions générales de vente

Les conditions générales de vente (CGV) décrites ci-après s'appliquent à toute les commandes. Toute modification doit être faite par écrit et doit être soumise à l'approbation d'Hidroten S.A. Hidroten S.A. s'accorde le droit de modifier ses tarifs à tout moment. Toutefois, elle s'engage à facturer les marchandises commandées aux prix indiqués lors de l'enregistrement de la commande.

Commandes: Les commandes se réaliseront par écrit, en y indiquant les références et les spécifications contenues dans la liste de prix officielle d'Hidroten, S.A. et devront maintenir les quantités indiquées.

Livraison: La date de sortie des commandes de nos magasins fixera la date de livraison. Les commandes pourront être fournies partiellement, sans que cela représente leur annulation.

Prix: Les prix indiqués dans la liste d'Hidroten, S.A. sont franc fabrique, et incluent les emballages. Les autres frais, tels qu'impôts ou taxes, sont au compte de l'acheteur. Les factures seront dressées au moment de la livraison des commandes avec les prix en vigueur à la date de sortie.

Transport: Le transport de marchandises est sous la totale responsabilité de l'acheteur, même dans le cas du transport à port payé. Les autres frais non spécifiés dans notre liste (emballages maritimes, avion, etc.) seront au compte de l'acheteur.

Garantie: Les produits Hidroten, S.A. sont garantis pour un an à partir de la date de sortie de la

merchandise, contre quel que soit le problème qui puisse apparaître par suite d'un défaut de fabrication.

Notre garantie comprend uniquement et exclusivement la réparation ou la substitution dans nos fabriques des pièces défectueuses, et n'assume pas ni indemnisations ni autres dépenses.

La garantie ne sera pas valide quand les défauts seront la conséquence d'une utilisation incorrecte ou quand les produits auront été manipulés, réparés ou modifiés hors de nos usines. Également, la garantie ne sera pas valide quand le produit aura été installé avec des matériaux ou méthodes hors des NORMES.

La garantie de nos matériaux reste limitée au remplacement du produit, du modèle ou de la pièce reconnu comme défectueux.

Les frais engagés par le retour et la restitution sont au compte de l'acheteur.

Paiement: Tous les paiements se feront au comptant, sauf dans le cas qu'il y ait un accord écrit.

Les modifications d'échéance de paiement, de modalité ou de la date devront avoir notre autorisation par écrit.

Tous les frais, taxes ou impôts effectifs à partir du moment de la commande seront au compte de l'acheteur.

L'acheteur remboursera au vendeur à titre de dommages et intérêts les charges bancaires et judiciaires produites à cause du retour d'effets impayés.

Réclamations et retours: Ne seront pas admis les réclamations ni les retours faits 10 jours après

la réception de la commande. Si la réclamation est acceptée par Hidroten, S.A. l'acheteur devra renvoyer le matériel parfaitement emballé et les frais de renvoi seront à son compte. De sorte nous appliquerons un accroissement d'un 10% de manipulation.

Annulation: Hidroten, S.A. se réserve le droit d'annuler ou rescinder tout acte de vente dans le cas de ne pas accomplir quelque condition exposée dans ce document, ainsi que dans le cas de non-paiement, total ou partiel, d'une commande ou de délais dans le paiement d'une commande antérieure, ainsi que dans le cas d'entreprendre contre l'acheteur des procédures exécutoires ou que celui-ci se déclare en cessation de paiements ou en faillite.

Réserve de propriété: Les matériaux fournis seront propriété d'Hidroten, S.A. jusqu'au moment du paiement. Hidroten S.A. se réserve le droit de retirer la marchandise, totalement ou partiellement, du domicile de l'acheteur si l'un des paiements n'est pas réalisé.

Compétence judiciaire: Pour résoudre les questions qui peuvent se dériver de l'application de ces normes, tant Hidroten comme l'acheteur, s'engage à se soumettre au Tribunal d'Alicante, et renonce à leur propre juridiction si elle en était différente.

Le contenu de ce document et les caractéristiques de nos produits peuvent être modifiés totalement ou partiellement sans avis préalable par Hidroten, S.A.
