keeping in control: any time, anywhere

Telemetry monitoring was once thought to be too expensive and complex for many water supply applications. But now, with wireless capability, monitoring and controlling your pumping equipment from wherever you are in the world and whatever the time is a simple and affordable reality.

Geoquip Water Solutions offers flexible, cost-effective wireless telemetry solutions for control and monitoring single, stand-alone or multiple complex systems. Its telemetry options are quick, simple and intuitive and don't require any specialist training or knowledge. System capabilities include the ability to monitor and control equip-

engineers weren't able to respond quickly enough, the system failed, resulting in a level of downtime that affected operational targets and efficiency.

The company were keen to install a system that identified problems before they became critical as well as utilise their staffing resources more effectively. Geoquip installed a wireless telemetry system that sent data back to a centralised computer on a continual basis and which allowed the data to be collected and presented in a way that tracked the pumping performance. The company were able to respond immediately a dip in performance occurred, inves-

ment from a smart phone or PC, check the status of all equipment at a glance, create bespoke dashboards that mimic equipment panel fronts, and collect, export, view and archive equipment data in multiple ways. You can be notified of your pump and control panel internal alarms by email or SMS so you will never miss a problem. All telemetry systems packages come with a free, easy to use app for the ultimate way to control and monitor your pumps directly from your smartphone.

Only recently, an industrial manufacturing company approached Geoquip for a more effective solution to its pumping equipment monitoring programme. Although the pump stations had been fitted with local alarms, if the

investigate the issue and then instigate correction measures if needed. It also meant that personnel at the plant were more effectively utilised.

Geoquip Water Solutions offer the full range of pumping equipment and is particularly renowned for its user-specific solutions. It has been working with technologically advanced manufacturers for some years and offers the widest range of monitoring and control systems as well as a comprehensive technical support service.

"We don't just supply the systems," said Ian Rowles, Geoquip's Technical Manager. "We advise on programming, system integration, retro-fitting and making sure each system meets the individual customer's needs."
