## Powerful Well Cleaning Treatment, BoreSaver, Launched in Canada

*Recycled water during treatment.*

*BoreSaver*, the NSF certified well cleaning treatments used in over fourteen countries worldwide, has launched in Canada, following its successful entry into the North American market two years ago. A recent article in [Groundwater Canada](#) highlights the effectiveness of *BoreSaver* and its long term benefits for systems suffering from iron oxide and iron bacteria contamination.

*BoreSaver* is a powerful range of cleaning solutions for iron oxide, bacterial slime and calcium carbonate contamination. Part of a phased-treatment program that has been successfully used across Europe, Australia and North America, *BoreSaver* has been introduced to Canada by Ability Pump & Equipment (Calgary) and Laval Underground Surveys, pioneers of downhole inspection equipment and the American partners of UK-based Geoquip Water Solutions, water industry and well rehabilitation specialists.

Tested and certified by the NSF for use in potable water supplies, *BoreSaver* is safe, easy to use, biodegradable and environmentally friendly. The *BoreSaver* range removes mineral deposits, improves water supply quality, increases water output and extends the working life of pumping equipment and accessories.

“Laval was approached by a number of Canadian companies looking for an effective and long-term solution for iron, manganese and calcium carbonate contamination,” said Mike Deed from Geoquip. “We welcome this opportunity to offer *BoreSaver* and a proven phased-treatment program that will significantly impact on the Canadian water well industry.”

Iron bacteria and iron oxide deposits are estimated to affect about 40% of the world’s water wells and contamination problems are widespread across Canada. Red/brown water staining is common and a build-up of deposits causes clogged screens and pumps, reduced yields and reduction in the well capacity.

Typical applications for *BoreSaver* include geothermal, pipelines, water supply wells, quarrying, mining, leachate pumping, irrigation and remediation. *BoreSaver* is used globally by large mining companies, government water supply organizations, industrial estates, university sites and commercial manufacturers who need clean water for their applications.
